

PROJECT FACTS & HIGHLIGHTS

- 100% of the exterior walls for living space is ICF Construction which allows for greater energy efficiency
- ICF construction is also far superior with regards to sound rating when compared to wood frame building which is huge consideration when people are living in a multi-story building
- The ICF walls leave very little opportunity for moisture to penetrate and if it does, will do relatively little damage when compared to a wood frame

PROJECT DETAILS

TYPE OF BUILDING: Multi-Storey

SIZE OF PROJECT: 35,500 sq. ft.

LOCATION OF PROJECT: Langford, British Columbia

YEAR BUILT: 2015

ICF SYSTEM USED: NUDURA
